

Roji Health Intelligence Non-MIPS Measure Specification
ICLOPS 15: Excess Days Rate and Degree of Excess (Including Physician Response)

Measure Description

This is a two-part measure, measuring rate of discharges with no excess days and, where excess days occur, the rate of overly excess days. Physician feedback is required to satisfy requirements. Patients will be assigned to a physician's Registry based on identification within the Hospital Quality dataset. The patient will be matched to existing patient data within this physician's source system using the standard Roji Health Intelligence patient-matching algorithm. Patients within the data who cannot be matched to patients within the physician source system data will be displayed, but flagged for review and validation.

- Performance Rate 1 is the percentage of discharges without excess days out of the total of all-cause discharges for patients aged 18 years and older.
- Performance Rate 2 is the percentage of discharges with excess days where clinician provided the required feedback AND where excess days numbered less than 3, out of the total number of discharges with excess days.
- Overall Performance Rate = (Part 1 Performance Met + Part 2 Performance Met) / (Part 1 Performance Eligible + Part 2 Performance Eligible).

Efficiency and Cost Reduction

Measure Type

Outcome

Measure Numerator

Part 1: Discharges without excess days

Part 2: Discharges with excess days and where clinician provided required feedback (to achieve "performance met" in part 2, excess days must number less than 3).

Feedback options are as follows:

- Delay in getting consultations or consultant feedback
- Delay in getting surgery scheduled
- Delay in getting tests or procedures done
- Delay in obtaining correct diagnosis
- Delay in setting up post-discharge care
- Delayed ordering of consultation
- Dispute that there were excess days
- Initial treatment not correct
- Response for readmission in addition to above or not previously listed
- Unexpected complications occurred

Measure Denominator

Part 1: All-Cause Discharges for patients aged 18 years and older

Part 2: All-Cause Discharges for patients aged 18 years and older AND discharges without excess days

Denominator Exceptions/Exclusions

None

Performance Calculation

This measure has two performance rates. Overall performance is calculated as follows:

Overall Performance Rate = (Part 1 Performance Met + Part 2 Performance Met) / (Part 1 Performance Eligible + Part 2 Performance Eligible)
