

Roji Health Intelligence Non-MIPS Measure Specification

RHI 4: Patients with a Change in Body Mass Index

Measure Description

This measure examines BMI changes using 3 Performance Rates:

- Performance Rate #1: The percentage of patients 18 years and older whose most recent BMI has decreased by at least 5 from the highest level to the most recent BMI out of all patients with at least 2 BMI levels in the measurement year or year prior to the measurement year with at least one BMI greater than or equal to 35.
- Performance Rate #2: The percentage of patients 18 years and older whose most recent BMI has increased by at least 5 from the lowest level to the most recent BMI, out of all patients with at least 2 BMI levels in the measurement year or year prior to the measurement year with at least one BMI less than 35.
- Performance Rate #3: The difference between Performance Rate 1 and Performance Rate 2, divided by the total denominator. Performance Rate 3 is the final performance rate for this measure.

Measure Type

Outcome

Measure Numerator

Part 1: Patients who experience a decrease of at least 5 from the highest value during the measurement year OR the previous year to the most recent value.

Part 2: Patients who experience an increase of at least 5 from the lowest value during the measurement year OR the previous year to the most recent value.

Part 3: The difference between Performance Rate 1 and Performance Rate 2, divided by the total denominator.

Measure Denominator

Part 1:

Patients aged 18 to 75 years

AND

At least two office visits in the measurement year or prior year

AND

At least one visit within the measurement year

AND

At least two BMIs are reported

AND

One BMI is greater than or equal to 35

AND

Most recent BMI is reported during the measurement year

Part 2:

Patients aged 18 to 75 years

AND

At least two office visits in the measurement year or prior year

AND

At least one visit within the measurement year

AND

At least two BMIs are reported

AND

One BMI is less than 35

AND

Most recent BMI is reported during the measurement year

Part 3:

Patients aged 18 to 75 years

AND

At least two office visits in the measurement year or prior year

AND

At least one visit within the measurement year

AND

At least two BMIs are reported

AND

Most recent BMI is reported during the measurement year

Denominator Exceptions/Exclusions

Denominator Exclusions:

- Patients who have a Charlson score of greater than 2
- Diagnosis of pregnancy during the measurement year or prior year

Performance Calculation

Performance rate #3 is the overall performance rate for this measure.
