

Roji Health Intelligence Non-MIPS Measure Specification
RHI 7: Uncontrolled Chronic Disease Patients Without A Follow Up Office Visit

Measure Description

Patients with a diagnosis of hypertension OR diabetes mellitus OR Heart Failure OR Asthma OR COPD who have not been seen in the office within six months of an encounter where there was evidence that the condition was uncontrolled

NQS Domain

Communication and Care Coordination

Measure Type

Outcome

Measure Numerator

Denominator-eligible patients who have not had an office visit within the last six months

Measure Denominator

Patients who have had an office visit in current year or prior year

AND

One or more of the following:

Have a diagnosis of hypertension and the most recent systolic blood pressure taken in the office was greater than 160 mmHg

OR

Have a diagnosis of diabetes mellitus and the most recent HgbA1C is greater than 9%

OR

Have a diagnosis of heart failure and the most recent Ejection Fraction is less than 40% or had a hospital admission in the past 6 months with a primary diagnosis of heart failure

OR

Have a diagnosis of asthma with a hospital admission in the past 6 months with a primary diagnosis of asthma

OR

Have a diagnosis of COPD with a hospital admission in the past 6 months with a primary diagnosis of COPD

Denominator Exceptions/Exclusions

Denominator Exclusions:

- Patients who have been seen in nursing home settings
- Patients who have been seen in home health/domiciliary settings

Performance Calculation

For this measure, performance is calculated inversely, meaning that a lower performance rate indicates better care coordination
